

## Unlock your harvest potential

The success of your operation depends as much on information management as it does on the management of fertilisers, sprays and other inputs. Today, Precision Agriculture represents the intersection of technology with traditional agriculture, all with one goal in mind – help you succeed. And no one knows more about providing you with the PA tools you need to succeed than John Deere.

John Deere Ag Management Solutions (AMS) and your local John Deere dealer have the precision guidance, documentation, and software solutions you're looking for – as well as the expertise to help you find the right combination of PA products to help you maximise your return on investment.

PA systems from John Deere AMS are designed to work together with your John Deere equipment. You can count on the components working together because they were designed in tandem – and backed by a company with more than 170 years of helping you succeed.

### Compatibility

But as well as designing solutions for John Deere equipment, many competitive models are catered for as well. The AutoTrac Universal Steering Kit is the mobile PA solution from John Deere that functions on many different vehicle platforms and with a choice of accu-

racy levels. You can leverage the investment in AutoTrac across more equipment in their fleet all year round. What's more, you have the opportunity to increase the productivity of older equipment and even non-John Deere equipment by incorporating the AutoTrac Universal Steering Kit into your operation.

The AutoTrac Universal Steering Kit works with over 450 different John Deere and non John Deere platforms. With this system you can improve driver operator effectiveness and alertness during the long hot days of harvest. Hourly productivity is improved by being able to consistently use the full platform crop cutting capacity saving time and fuel by decreasing overlap.

Because of its ease of installation, in as little as an hour, the AutoTrac Universal Steering Kit starts driving profit to your bottom line. If you already own a GreenStar display and StarFire iTC, your initial investment is even lower. Hands-free guidance can literally be carried home from the dealership and be put to work in your operation the very same day.

When you're ready to hand over the wheel and experience a fast pay back, ask your John Deere Dealer about the AutoTrac Universal Steering Kit.

For more information on John Deere AMS, visit our Web site at [www.JohnDeere.com.au](http://www.JohnDeere.com.au) or Freecall 1800 800 981 to contact your local John Deere dealer. ■

Because of its ease of installation, the AutoTrac Universal Steering Kit can be up and running in as little as an hour.
